**FEATURES & BENEFITS**

- Matte surface for no-glare viewing
- Impressive performance-to-cost value for graphic arts and prepress applications.
- Economical for most budgets and applications
- High opacity and optimal color gamut

**MEDIA COMPATIBILITY**

- \* Compatible printers include HP DesignJet®, Encad, ColorSpan, Canon, Epson, and other piezo, water-based systems. Com0patible with pigment (UV) and dye inks, with pigment inks offering greater resistance to UV fade.
- \* For complete Magic® product set, refer to Magic Printer Compatibility Chart under Technical Support on [www.magicinkjet.com](http://www.magicinkjet.com).
- \* For additional product details – including printer settings and lamination guidelines – see Application Guide under Tech Support of [www.magicinkjet.com](http://www.magicinkjet.com)

# MAGICLEE® / MAGIC® APPLICATIONS GUIDE

## MagicLée COATED MATTE PRESENTATION PAPERS

MAGICLEE® and MAGIC® brands feature a range of quality, coated matte presentation papers designed specifically to provide impressive performance-to-cost value for graphic art and prepress applications. Each of the five options, ranging from 98 g/m<sup>2</sup> to 212 g/m<sup>2</sup>, offers high opacity, bright white appearance, and optimal color gamut. Full-color images print cleanly and crisply even with ink saturation levels up to 200%. The coated matte presentation papers are compatible with pigment (UV) and dye inks. GFIO140 & GFIO212 are compatible with solvent ink jet printers. Fast dry times and easy lamination make these papers excellent choices for high volume production applications.

**Printer Settings:** Ink saturation limits can vary due to ink types, ink drop volume and humidity, so ink saturation levels should be optimized for specific printer, ink and software combinations. Over saturation will result in paper cockle and possibly head strike. These presentation papers work best in an environment between 18-30°C or 65-86°F and between 30-70%RH. Longer ink dry times will occur in higher RH conditions.

**Material Handling:** Store unused media in its original packaging. Images should be stored in an environment with 50% RH or less. Papers can absorb moisture in high humidity conditions making ink dry times longer or can interfere with proper laminate adhesion.

**Color Profiles:** Color profiles can be obtained for a selected RIP, ink, and printer combination on the [magicinkjet.com](http://magicinkjet.com) web site.

### FINISHING RECOMMENDATIONS

**Lamination:** The coated matte presentation papers can be overlaminated with most cold laminates and low temperature hot laminates, but cold are preferred and give better adhesion results. Make sure the images are completely dry prior to laminating. Exceeding the recommended ink saturation level can affect laminate adhesion or make lamination difficult due to paper cockle. When the paper is overlaminated with heavy gauge laminates and either mounted to a board or encapsulated, overlap the image with a 0.25 inch safe edge of laminate. This will seal the paper, preventing moisture absorption and paper splitting from the undue stress of the heavy gauge laminating films. Use laminates of equal gauge when encapsulating to prevent image curl.

**Mounting:** Cold, pressure-sensitive adhesives typically provide the most aggressive bonds and are recommended for use with these products.

### RECYCLE AND DISPOSAL

Disposal by recycling of ink jet media is the preferred method. Where recycle markets do not exist, disposal by landfill or an approved incinerator is acceptable. See the Magic Recycle Technical Bulletin @ [www.magicinkjet.com](http://www.magicinkjet.com).
