# INK COMPATIBILITY ICONS HELP

Every product in the Dietzgen and Magic Inkjet catalog has a set of ink compatibility icons that appears on product information. Each colored icon represents a specific printer and ink type, with a colored ring around each ink compatibility icon.

	BEST	GOOD		BEST	GOOD
Dye	D	D	**Latex**	L	L
Pigment	P	P	**Eco-Solvent**	E	E
Solvent	S	S	**PageWide**	P W	P W
UV	U	U	**Toner**	T	T

Products with the green colored "**BEST**" ring around the ink compatibility icon exhibited exceptional print performance with that ink type. These products work well with OEM settings right out of the box. The resulting prints were high quality and required no adjustments on the printer or RIP software.

Products with the yellow colored "GOOD" ring around the ink compatibility icon exhibited acceptable print performance with that ink type. These products work with OEM settings, but they may require adjustments on the print, RIP software or both in order to produce acceptable results.
